

HS 320 coupling - Hose connection

Product group	524
Valve	
Bulkhead	
Min temperature (°C)	-20

Now Hydroscand's own 320 coupling is in stock! The quick-release coupling replaces Cejns standard 320 coupling (not esafe) where the HS 320 coupling also has a rubber sleeve. Due to the solid construction with rubber sleeve, the clutch does not wear easily and it is non-abrasive to surrounding components. This is an affordable coupling operated with a single hand, which makes the clutch very easy to connect to other pneumatic driven devices. The coupling is suitable for workshops where there is a need for easy and quick connection and disconnection to different compressed air tools. Industries that need a simple connection for machinery and equipment powered by compressed air, benefit from this user-friendly coupling.

	Hose ID (mm)	Weight (kg)
55522832	6	0.1
55522833	8	0.1
55522835	10	0.1
55522836	13	0.1
